The sequences of the 33 class I tRNAs, representing 18 AAs, are sequences of the 33 class I tRNAs, representing 18 AAs, are ukaryotes, only Leu and Ser tRNAs are class II tRNAs (large extra arm).

The archaebacterial tRNAs follow general tRNA patterns, but have certain characteristics so far not reported for other tRNAs: all have 'cm' at position 55; "all' at position 55; "all' at characteristics so far not reported for other tRNAs: all lo; "mif" at position 55; "all obsition 15. Only archaebacteria modify the residue at position 15. Only archaebacteria modify the residue at position 15. Only archaebacteria modify the residue at position 55. "chosphorylated the initiator tRNA is unique in that it has a 5'-phosphorylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                linear BCT 15-APR-1994

E2F Novel RNA aptamers that selectively bind coagulation pathway factors, E2 family members, Ang1 or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Ang1 or Ang2 activity in a mammal.

Claim 13; Fig 1A; 216pp; English

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoietin-1 (Angi) or Ang2, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Ang1 or Ang2 of about 20 nM or less. (I) (II) and (III) have cardiant and cyrostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that

```
the biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (I) are also useful for treating cardiovascular diseases in the mammal. (II) are useful for modulating ESF activity in a warm-blooded vertebrate. (II) are useful for modulating ESF activity in a warm-blooded vertebrate. (I) are potent cardiovasulants and significantly delay the clotting time of normal human blasma or the activity in a warm-blooded vertebrate. (I) are potent cardiovasulants and significantly delay the clotting time of normal human continual hyperplasia following bypass graft surgery. (II) are useful for modulating angiogenesis. The RNA aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research bind, and for isolating and purifying substances to which they specifically bind. And so as a separation reagent for retrieving the targets to which they bind, and as a separation reagent for retrieving the targets to which they they specifically bind. ABN88488 to ABN88713 and ABB881231 represent context.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GGGAGAGAGAAGAGGGAUGGGGACUAUACCGCGUAAUGCUGCCUCCCCAUUCCGGAACG 60

```

The present invention describes RNA aptamers (1,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c)

family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Ang1 or Ang2 activity in a mammal. Novel RNA aptamers that selectively bind coagulation pathway factors,

```
angiopoietin-1 (Angl) or Ang2, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family commender, or Ang1 or Ang2 of about 20 nM or less. (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (II) are also useful for modulating E2F activity in a warm-blooded vertebrate. (II) are useful for modulating activity in a warm-blooded vertebrate. (II) are useful for modulating and anticoagulants and significantly delay the clotting time of normal human coagulants and significantly delay the clotting time of normal human cuseful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplasia following bypass graft surgery. (III) are useful for intimal hyperplasia following bypass graft surgery. (III) are useful for cascarch and therapeutic context. The aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic cragents to detect the presence or absence of target substances to which they comind, and as a separation reagent for retrieving the targets to which they be bind, and as a separation reagent for retrieving the targets to which they specifically bind. The present invention describes RNA aptamers (1,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) anagopoietin-1 (Angl) or Ang2, respectively, where (1), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Ang1 or Ang2 of about 20 mM or less. (1), (II) and (III) have cardiant and cycestatic activities. (1) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (1) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate (i) are also useful for modulating activity of the mammal. (II) are useful for modulating a warm-blooded vertebrate. (II) are useful for modulating anginicantly delay the clotting time of normal human coagulants and significantly delay the clotting time of normal human coagulants and significantly delay the clotting time of normal human coagulating angiogenesis. The RNA aptamers are also useful for diagnostic research and therapeutic context. The aptamers for conditions e.g., intimal hyperplasia following bypass graft surgery. (III) are useful for modulating angiogenesis. The RNA aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful for diagnostic reagents to detect the presence or absence of target substances to which they specifically bind, and for identifying substances to which they specifically bind, and for isolating and purifying substances to which they specifically bind. The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoietin-I (Angi) or Angi, respectively, where (I), (II), (III) have a cardiant or angiopoietin-I (Angi) or Angi, respectively, where (I), (II) and (III) have a cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (I) are also useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting cell proliferation in a number of conditions e.g. intimal hyperplasia following bypass graft surgery. (III) are useful for inhibiting cell proliferation in a number of conditions e.g. intimal hyperplasia following bypass graft surgery. (III) are useful for research and therapeutic context. The aptamers are also useful for dagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic for research of they specifically bind, and for identifying substances to which they specifically bind. The present invention describes RNA aptamers (I,IIII) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) andiopoietin-I (Angl) or Ang2, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family cardiant and cytostatic activities. (I) are useful for modulating the cardiant and cytostatic activities. (I) are useful for modulating the bloogical activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (I) are useful for modulating E2F cardiavascular diseases in the mammal. (II) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting cell proliferation in a number of conditions e.g., incimal hyperplasia following bypass graft surgery. (III) are useful for diagnostic consecul for inhibiting only propass graft surgery. (III) are useful for which they specifically bind, and for identifying substances to which they companies as esparation reagent for retrieving the targets to which they bind, and as a separation reagent for retrieving the targets to which they becifically bind. Angles to ABN88131 and ABBB3131 represent they sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                        Novel RNA aptamers that selectively bind coagulation pathway factors, Ez family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 96 BP; 30 A; 23 C; 26 G; 0 T; 17 U; 0 Other;

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) a dissociation constant for the coagulation pathway factor, an E2F family cardiation constant for the coagulation pathway factor, an E2F family cardiating and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-coagular diseases in the mammal. (II) are useful for modulating E2F cardiovascular diseases in the mammal. (II) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting call profiferation in a number of conditions e.g., intimal hyperplasia following bypass graft surgery. (III) are useful for diagnostic. coseance and therapeutic context. The aptamers are useful for diagnostic, they specifically bind, and for identifying substances to which they copied, and as a separation reagent for retrieving the targets to which they bind, and as a separation reagent for shouls and Abundan Abunda and Abundan Abunda Abunda, and Abunda, 
                                                                                                                                                                                                                                                                                                                                                                                  Novel RNA aptamers that selectively bind coagulation pathway factors, E2F family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Ang1 or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GGGAGAGAGGAAGAGGGAUGGGGACUAUACCGCGUAAUGCUGCCUCCCCAUUCCGGAACG 60

```
The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoietin-1 (Angi) or Angi, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Angi or Angi of about 20 nM or less. (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate. (II) are useful for modulating cardiovascular diseases in the mammal. (II) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating cardiovasculants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplasia following bypass graft surgery. (III) are useful for diagnostic research and therapeutic context. The aptamers are useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            E2F
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              reagents to detect the presence or absence of target substances to which they specifically bind, and for identifying substances to which they specifically bind, for isolating and purifying substances to which they bind, and as a separation reagent for retrieving the targets to which they specifically bind. ABN88488 to ABN88713 and ABB81231 represent
RNA aptamer, identification, coagulation factor, angiopoietin, thrombin, E2F family, cardiant, cytostatic, cardiovascular disease, anticoagulant, cell proliferation, intimal hyperplasia, angiogenesis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel RNA aptamers that selectively bind coagulation pathway factors, Ez family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 95 BP; 24 A; 25 C; 29 G; 0 T; 17 U; 0 Other;

The present invention describes RNA aptamers (I,IIII) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) andiopoletin-I (Angl) or Angl, respectively, where (I), (II) have a candipoletin-I (Angl) or Angl, respectively, where (I), (II) have a dissociation constant for the coagulation pathway factor, an E2F family cardiant and cytostatic activities. (I) are useful for modulating the biological activity of the coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the blooded vertebrate is modulated. (I) are useful for treating cardiovascular diseases in the mammal. (II) are useful for modulating E2F cardiovascular diseases in the mammal. (II) are useful for modulating cardiovascular diseases in the mammal. (II) are useful for modulating and significantly delay the clotting time of normal human coagulation of platelets in response to thrombin. (II) are useful for intibiting cell proliferation in a number of conditions e g., intimal hyperplasia following bypass graft surgery. (III) are useful for intibiting angiogenesis. The RNA aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful for diagnostic research and therapeutic context. The aptamers are useful for diagnostic reagents to detect the presence or absence of target substances to which they specifically bind, and for identifying substances to which they specifically bind. Abnaged to Abnagell substances to which they specifically bind. Abnaged to Abnagell substances to which they context of they specifically bind. Abnaged to Abnage and Abnagell substances to which they caparation reagent for retrieving the targets to which they caparation reagent for retrieving the targets to which they appeared to the present context. The aptencent intervent they appeared to the present context. The aptencent and therapeutic context. The aptencent and therapeutic context. The aptence to which they specifically bind. Abnaged to Abnage and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel RNA aptamers that selectively bind coagulation pathway factors, E2 family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 GGGAGAGAGGAAGAGGGAUGGGGACUAUACCGCGUAAUGCUGCCUCCCCAUUCCGGAACG

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoletin-1 (Angl.) or Angl. respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Angl or Angl of about 20 nM or less. (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate. (II) are useful for modulating E2F activity in a warm-blooded vertebrate. (II) are useful for modulating cardiovascular diseases in the mammal. (III) are useful for modulating activity in a warm-blooded vertebrate. (II) are useful for modulating cardiovasculants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (III) are useful for inhibiting cell proliferation in a number of conditions of conting time of normal fundant warm-leads of conditions and an under of conditions of conting time of normal fundant warm the activation of platelets in response to thrombin. (III) are useful for inhibiting cell proliferation in a number of conditions of c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel RNA aptamers that selectively bind coagulation pathway factors, E2F family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          intimal hyperplasia following bypass graft surgery. (III) are useful for modulating angiogenesis. The RNA aptamers are also useful for diagnostic, research and therapeutic context. The aptamers are useful as diagnostic, reagents to detect the presence or absence of target substances to which they specifically bind, and for identifying substances to which they specifically bind, for isolating and purifying substances to which they bind, and as separation reagent for retrieving the targets to which they they specifically bind. ABN88488 to ABN88713 and ABB81231 represent
                                                                                                                                                       RNA aptamer; identification; coagulation factor; angiopoietin; thrombin; E2F family; cardiant; cytostatic; cardiovascular disease; anticoagulant; cell proliferation; intimal hyperplasia; angiogenesis;
Coagulation factor IXa binding/inhibiting RNA aptamer SEQ ID NO:13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 56; DB 6; Length 96;

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopotetin-I (Angi) or Angi, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family community of a coagulation pathway factor, an E2F family cardinistering of tytostatics. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulating pathway factor in the warm-blooded vertebrate. (II) are useful for modulating E2F activity in a warm-blooded vertebrate. (III) are useful for modulating Cardiovascular diseases in the mammal. (II) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting call profiferation in a number of confictions of intimal hyperplasia following bypass graft surgery. (III) are useful for diagnostic research and therapeutic context. The aptamers are useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful so which they specifically bind, and for isolating aubstances to which they bind, and as a separation reagent for retrieving the targets to which they bind, and as a separation reagent for retrieving the targets to which they bind, and as a separation of the present invention
                                                                                                                                                                                                                                                                                                                                                                                              aptamer; identification; coagulation factor; angiopoietin; thrombin; family; cardiant; cytostatic; cardiovascular disease; anticoagulant; proliferation; intimal hyperplasia; angiogenesis;
Novel RNA aptamers that selectively bind coagulation pathway factors, E2 family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.
                                                                                                                                                                                                                                                                                                                                                     Coagulation factor IXa binding/inhibiting RNA aptamer SEQ ID NO:15.

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoletin; (Angi) or Angi, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Angi or Angi of about 20 nM or less. (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the obiological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that biological activity of the coagulation pathway factor in the warm-blooded vertebrate. (II) are useful for modulating cardiovascular diseases in the mammal. (II) are useful for modulating cardiovascular diseases in the mammal. (II) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating cardiovasculants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplasia following bypass graff surgery. (III) are useful for diagnostic research and therapeutic context. The aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (C) angiopoietin-I (Angi) or Ang2, respectively, where (I), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Ang1 or Ang2 of about 20 nM or less (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-blooded vertebrate (e.g., a mammal) such that biological activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (I) are also useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating and so activity in a warm-blooded vertebrate. (III) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are

useful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplasia following bypass graft surgery. (III) are useful for modulating angiogenesis. The RNA aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic reagents to detect the presence or absence of target substances to which they specifically bind, and for identifying substances to which they becifically bind, for isolating and purifying substances to which they bind, and as a separation reagent for retrieving the targets to which they specifically bind. ABN88488 to ABN88713 and ABB81231 represent sequences used in the exemplification of the present invention

Novel RNA aptamers that selectively bind coagulation pathway factors, E2 family members, Angl or Ang2, useful for modulating coagulation pathway factor activity, E2F activity and Angl or Ang2 activity in a mammal.

Claim 13; Fig 6A; 216pp; English.

The present invention describes RNA aptamers (I,II,III) that selectively bind: (a) a coagulation pathway factor; (b) an E2F family member; or (c) angiopoletin-1 (Angi) or Ang2, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family member, or Ang1 or Ang2 of about 20 nM or less. (I), (II) and (III) have cardiant and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (I) to a warm-looded avertebrate (e.g., a mammal) such that the biological activity of the coagulation pathway factor in the warm-

```
cardiovascular diseases in the mammal. [II] are useful for modulating E2F activity in a warm-blooded vertebrate. [III] are useful for modulating E2F activity in a warm-blooded vertebrate. [III] are useful for modulating D2F and or Angl activity in a warm-blooded vertebrate. [III] are useful for modulating control day the clotting time of normal human plasma or the activation of platelets in response to thrombin. [II] are useful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplasia following bypass graft surgery. [III] are useful for modulating angiogenesis. The RNA aptamers are also useful for diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic research and therapeutic context. The aptamers are useful as diagnostic for farget specifically bind, and for identifying substances to which they specifically bind. Abs08448 to Abs08413 and Abs084231 represent context invention
                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

member, or Angl or Angl of about 20 mM or less. (1), (II) and (III) have cardiant and cytostatic activities. (1) are useful for modulating the biological activity of a coagulation pathway factor which involves administering (1) to a warm-blooded vertebrate (e.g., a mammal) such that bloodical activity of the coagulation pathway factor in the warm-blooded vertebrate is modulated. (I) are also useful for modulating EZF activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating activity in a warm-blooded vertebrate. (III) are useful for modulating anticoagulants and significantly delay the clotting time of normal human plasma or the activation of platelets in response to thrombin. (II) are useful for intimal hyperplasia following bypass graft surgery. (III) are useful for modulating and herapetuic context. The aptamers are useful as diagnostic research and therapetuic context. The aptamers are useful as diagnostic reagents to detect the presence or absence of target substances to which they specifically bind, for isolating and purifying substances to which they specifically bind. AbbN88488 to AbbN88113 and AbbN881231 represent they specifically bind. AbbN88488 to AbbN88113 and present invention
  coagulation pathway factor, an E2F family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 GGGAGAGAGGAAGGGGGAUGGGGAACUAUACCGCGUAAUGCUGCCUCCCCAUUCCGGAACG 60

Chain 13; Fig 1B; 216pp; English.

XX

The present invention describes RNA aptamers (I,III) that selectively compliance of the coagulation pathway factor, an E2F family member; or (G) angiopoletin-1 (Angi) or Ang2, respectively, where (I), (II), (III) have a dissociation constant for the coagulation pathway factor, an E2F family compliant and cytostatic activities. (I) are useful for modulating the cardinate and cytostatic activities. (I) are useful for modulating the biological activity of a coagulation pathway factor which involves a marm-blooded vertebrate (e.g., a mammal) such that compliants error and second vertebrate is modulated. (I) are useful for modulating E2F cardivity in a warm-blooded vertebrate (e.g., a mammal) such that compliants and significantly delay the clotting time of normal human cardivity in a warm-blooded vertebrate. (I) are useful for modulating E2F cardivity in a warm-blooded vertebrate (III) are useful for modulating and or Ang2 activity in a warm-blooded vertebrate. (III) are useful for modulating and cardivity in a warm-blooded vertebrate (III) are useful for modulating angiogenesis following bypass graft surgery. (III) are useful for inhibiting cell proliferation in a number of conditions e.g., intimal hyperplass following bypass graft surgery. (III) are useful for diagnostic.

C anticoagulating angiogenesis. The RNA aptamers are useful as diagnostic.

C indulating angiogenesis. The RNA aptamers are useful as diagnostic.

C research and therapeutic context. The aptamers are useful as diagnostic.

C reagents to detect the presence or absence of target substances to which they bind, and as separation reagent for retrieving the targets to which they bind, and as a separation and puritying substances to which they be specifically bind, and as a separation and purity and the present invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 12,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                              Patent No. 614686
GENERAL INFORMATION:
APPLICANT: James D. Thompson
TITLE OF INVENTION: IMPROVED RNA POLYMERASE III-BASED
TITLE OF INVENTION: EXPRESSION OF THERAPEUTIC RNAS
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: Suite 4700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 14, Application US/08512861A
Patent No. 6146886
GENERAL INFORMATION:
APPLICANT: James D. Thompson
TITLE OF INVENTION: IMPROVED RNA POLYMERASE III-BASED
TITLE OF INVENTION: EXPRESSION OF THERAPEUTIC RNAS
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
                                           IMPRÔVED RNA POLYMERASE III-BASED EXPRESSION OF THERAPEUTIC RNAS
                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1484, Application US/10803180
GENERAL INFORMATION:
APPLICANT: CARGILL, Michele et al.
TITLE OF INVENTION: GENETIC POLYMORPHISMS ASSOCIATED WITH
TITLE OF INVENTION: RHEUMATOID ARTHRITIS, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CL001511
CURRENT APPLICATION NUMBER: US/10/803,180
CURRENT APPLICATION NUMBER: US/10/803,180
CURRENT FILING DATE: 2004-03-18
NUMBER OF SEQ ID NOS: 6676
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Duclert, A.

//done lib="Mouse lobb plasmid UUGCLM library"
//note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gal
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb]AP129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli Xil0-Gold (stratagene) cells
and selected for ampicillin resistance."

/ Organism="Homo saptens"
/ Ab_axef="taxon:9606"
/ Clone="INAGE:316297"
/ Lissue_type="colon tumor, RER+"
/ Inb_host="DH10B"
/ Clone lib="NCI CGAP Col6"
/ Note="Gorgan: colon" Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; Plaemid DNA from the normalized library NGI CGAP Col0 was prepared, and 88 circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144544-1143351).

Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
This sequence is recovered from the left border of the T-DNA. It
indicates an insertion close to or within gene Atlg06940. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:

/note="PCR was performed on DNA from Arabidopsis thaliana
plants (TI) which were transformed with the T-DNA from
vector pAC16. The lines contain one or more T-DNA
insertions. The DNA fragment(s) resulting from the PCR
were directly sequenced to determine the genomic sequence
flanking the insertion. Sequences displaying significant
similarity to the A. thalaina nuclear genome sequence
processed for submission. T-DNA derived sequences were
                                                                                                                                                                                                                                                                   BX893710 117 bp DNA linear GSS 15-DEC-2003
